

hanstat

*have a nice statistics ...*

*... with a web application for reporting and data analysis*

The data and the information that can be extracted from them, are the key to understand the processes and phenomena of the various human activities.

Understanding what is hidden in a list of data, reporting two or more variables of an event, their representation in graphs, are just some of the activities that today any organization has to face, from small business to research bodies.

*hanstat* fits into this context: it is created to allow easy extraction of information from databases and displays them faster, while also allowing advanced statistical analysis, using a performance-oriented development, safety and versatility.

- ✓ ***Web-based***  
It's a web application, no need of client installation package
- ✓ ***Simple***  
It's simple to use, no need to know SQL
- ✓ ***Flash***  
You can make high quality Adobe Flash plots
- ✓ ***Statistical analysis***  
You can make advanced statistical analysis with specific tool
- ✓ ***Exporting***  
You can export reports in many file format (PDF, Excel or OpenOffice sheet, XML, text)

- ✓ ***Scheduler & mail alert***  
You can configure it for automatic report generation and you can send results to users by e-mail
- ✓ ***Security***  
Users and profiles management
- ✓ ***Internationalization***  
Available in english and italian
- ✓ ***Customization***  
Easy layout change by CSS style sheet
- ✓ ***Standards compliant***  
Compliance with standards XHTML 1.0 and CSS 2.1 (W3C)

Here there is a list about technical aspects about *hanstat*:

- ✓ **PHP** was used as main programming language; other parts of application are written in C language.
- ✓ **LAMP** (Linux, Apache, MySQL, PHP) is the operative platform
- ✓ web content is built with asynchronous request between client and server, using Javascript *object XmlHttpRequest*
- ✓ **MVC** (Model, View, Controller) was used as framework development
- ✓ Statistical analysis is performed with external tool (**R & gnuplot**)

To work at 100%, *hanstat* needs web browser with *CSS*, *Javascript* and *Flash* compatibility. Now are supported:

- ✓ Gecko browser based
- ✓ KHTML e WebKit browser based
- ✓ Internet Explorer
- ✓ Opera

Speaking about database, you can use main enterprises and Open Source products:

- *MySQL*
- *PostgreSQL*
- *Oracle*
- *MS SQL Server*
- *IBM DB2*
- *Firebird*
- *SQLite*

Looking at its own nature of general purpose software, *hanstat* is usefull in many different environment, both in small or medium enterprises and public organization.

It can be delivered in three ways:

- remote service ASP (*Application Service Provider*)
- providing a “*white box*”
- installed on customer hardware

For every solution, it's available a consulting service for statistical analysis and training.
